---

### Mark Your Calendar

**February 19 - Family Day**

Office Closed

**April 4 - AGM**

Burnt Lake Gas Co-op Office

---

### **FOR YOUR SAFETY**

Is the meter site in your yard free from all hazards?

- Vehicle Traffic?
- Snow Removal?
- Other Obstructions?

If you feel we need to be made aware of a meter concern that is not evident during our annual site visit, please call us so we may meet with you on site and rectify the situation.

### **WHAT IS CARBON MONOXIDE**

Carbon monoxide (CO) is a colourless, odourless and tasteless toxic gas that interferes with the blood's ability to absorb and transport oxygen. It is produced when fuels are burned incompletely; tobacco smoking, idling gasoline-powered vehicles and the burning of oil, coal, wood, charcoal, kerosene, propane or natural gas can all produce carbon monoxide.

-The first line of defense against carbon monoxide poisoning is prevention through annual inspections of your home heating equipment, including vents and chimneys.

-Alarms are a good second line of defense and every home should have one or more. Carbon Monoxide detectors normally expire in 5 to 7 years and should be installed as per manufacturer's recommendations.

-If you need to have your heating appliances inspected by a professional contractor, please feel free to contact our office for referrals.

### **DIRECTORSHIP APPLICATIONS**

Wednesday April 4<sup>th</sup> is our Annual General Meeting.

Every year, there are three director positions up for election. Information on these directorships and applications will follow in our February newsletter and local newspapers.

***Call the office if interested in applying for Directorship.***
